

## PVC GUTTERS

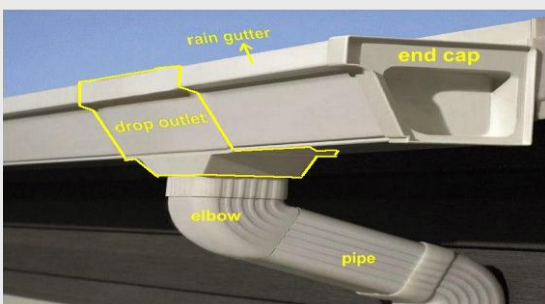

Space Mabati's PVC gutters and accessories provide a modern, durable, and low-maintenance solution for directing rainwater away from your roof and foundation. Made from high-quality uPVC (unplasticized polyvinyl chloride) with UV stabilizers, these systems are specifically suited to Kenya's heavy seasonal rains, high humidity, coastal salt air, and intense sunlight. Unlike traditional metal gutters, PVC never rusts, warps, or requires painting, offering excellent value for residential, commercial, and agricultural buildings.

### KEY FEATURES

- **Complete Rust & Corrosion Resistance:** Ideal for humid/coastal areas (e.g., Mombasa, Malindi) and high-rainfall zones – no rust stains or structural weakening over time.
- **Long Lifespan:** 10–20+ years with proper installation; UV-stabilized to resist fading, cracking, brittleness, and degradation from Kenya's sun.
- **Lightweight & Easy Installation:** Significantly lighter than metal gutters – quick to handle, cut, and snap-fit; reduces labor costs and structural load on roofs.
- **Smooth Interior Flow:** Low friction prevents debris buildup (leaves, dirt); water flows freely and efficiently, minimizing clogs.
- **Affordable & Cost-Effective:** 30–50% cheaper than quality metal alternatives; low maintenance (no painting or frequent cleaning) saves money long-term.
- **Eco-Friendly & Recyclable:** Non-toxic, recyclable material; supports rainwater harvesting for clean water collection (gardening, domestic use).

### SIZES:

All gutters and accessories come in sizes of five and seven inches.
